

ABOUT ALLONIA

Created in 2021, Allonia (ex. Aleia) offers companies and public organisations THE 100% sovereign, secure and collaborative AI SaaS Platform.

Our all-in-one 360° platform enables technical and business teams to collaborate very easily on all AI projects (classical AI and/or generative AI).

Our platform provides the most innovative tools and integrates all kinds of data, a wide selection of models and libraries, all on a high-performance, sovereign infrastructure.

- Import your data and code directly into the integrated, collaborative notebook.
- Manage your teams and use the model(s) of your choice.
- Monitor and fine-tune models for optimum performance.
- Speed up production by interfacing with your business applications.

More than twenty customers in various sectors (energy, logistics, mobility, cyber, etc.) have placed their trust in us !

Allonia now has 40 employees and is rapidly expanding !
Discover our 3 offers in this brochure : ALLONIA PLATEFORME, END POINT and CHAT.

ALLONIA
FAST TRACK TO AI

ALLONIA - CYBERSECURITY

AI as a Service

Artificial Intelligence SaaS platform

Allonia (ex. Aleia) is THE sovereign artificial intelligence platform to accelerate the AI projects of large companies, SMEs, ETIs and public organisations.

ALLONIA - CYBERSECURITY

AI is increasingly used in the field of cybersecurity to detect threats, prevent attacks and protect IT systems against intrusions.

Realise your AI projects **with Allonia** on a sovereign infrastructure hosted in France, **with complete security for your data**. Access your space completely securely and exchange information with your teams, customers and partners.

Allonia is involved in 3 major government projects

Cylvia project

This project has been funded by the government as part of the France Recovery Plan.

French project, with 4 partners :

Three AI models are already available :

- The typosquatting
- The detection of strange events
- Enriched automatic classification

The aim is to develop an artificial intelligence platform accessible to the Cyber Campus community, thereby fostering the development of new sovereign services and applications for European and international markets.

Cybiah project

The project was funded by the European Union and the Ile-de-France region.

On 16 March 2023, during her visit to the Cyber Campus, Valérie Pécresse announced the support of the IDF region for the Île-de-France region's support for the Cybiah.

This Europe-wide project, funded by the EU and the IDF, aims to achieve two major objectives :

- Train and equip SMEs and public authorities to understand and protect themselves against Cyber attacks
- Develop the maturity of cybersecurity in the Paris region among service providers and customers

The Cybiah project is a consortium of 11 members :

ReadyNov project

The "Readynov" project aims to guarantee the security of your information systems and protect you against rapid and destructive attacks that could compromise your business.

Protect your business with Allonia, Sittincloud and the support of the Occitanie region.

A few examples to help you understand the project :

- Early detection of deviant behaviour
- Rapid response to threats
- High-level cyber security service
